

CARING FOR FURNIPART...

# Handles, Knobs & Profiles

Thank you for choosing furnipart for your home, and by doing so you have selected a range which meets the highest standards of quality and design. This guide will keep you informed of how best to care for your furnipart products.

## Lacquered Surfaces

Lacquered finishes are applied to a cast metal in either Zinc or Aluminium. Lacquered surfaces are hard-wearing, but they are not resistant to scratching if not cared for correctly.

### We recommend:

- General cleaning should be done with a wrung cloth and water.
- Avoid sliding hard and rough objects across the handle surface.
- Avoid exposing your furnipart handle to strong chemicals and cleaners, such as scouring powder/cream, solvents, oven cleaners and paint removers etc.
- A lacquered surface that has not been properly cared for may flake and come loose from the handle material over time.

## Chrome-Plated Surfaces

Our chrome-plated products are available in either a gloss or matt finish. Chrome-plating is completed on a casted metal in either Zinc or Aluminium. Chrome surfaces are hard-wearing, but they are not resistant to scratching if not cared for correctly.

### We recommend:

- General cleaning should be done with a wrung cloth and water.
- Avoid sliding hard and rough objects across the handle surface.
- Avoid exposing your furnipart handle to strong chemicals and cleaners, such as scouring powder/cream, solvents, oven cleaners and paint removers etc.
- A chrome-plated surface that has not been properly cared for may discolor and dull over time.

### **Galvanized Surfaces**

Our galvanized products are available in various colours and designs. The galvanization process is completed on a casted metal in either Zinc or Aluminium. A galvanised surface is hard-wearing, but it is not resistant to scratching if not cared for correctly.

#### **We recommend:**

- General cleaning should be done with a wrung cloth and water.
- Avoid sliding hard and rough objects across the handle surface.
- Avoid exposing your furnipart handle to strong chemicals and cleaners, such as scouring powder/cream, solvents, oven cleaners and paint removers etc.
- A galvanized surface that has not been properly cared for may discolor and dull over time.

### **Anodised Surfaces**

Anodised surfaces are sanded and polished using either casted or extruded Aluminium. An anodised surface is hard-wearing, but it is not resistant to scratching if not cared for correctly.

#### **We recommend:**

- General cleaning should be done with a wrung cloth and water.
- Avoid sliding hard and rough objects across the handle surface.
- Avoid exposing your furnipart handle to strong chemicals and cleaners, such as scouring powder/cream, solvents, oven cleaners and paint removers etc.
- An anodised surface that has not been properly cared for may discolor and dull over time.
